Skin Corrosion/Irritation: Not classified
Serious Eye Damage/Irritation: Causes serious eye irritation.
Respiratory or Skin Sensitization: Not classified
Germ Cell Mutagenicity: Not classified (No evidence of genotoxicity was seen in bacterial [Salmonella and E. coli] or mammalian [Chinese hamster lung-derived cells] in vitro assays of mutagenicity, the in vitro CHO/HGPRT assay of mutagenicity, or in vivo clastogenicity assays performed in mice; tacrolimus did not cause unscheduled DNA synthesis in rodent hepatocytes.)
Carcinogenicity: Not classified (Carcinogenicity studies were carried out in male and female rats and mice. In the 80-week mouse study and in the 104-week rat study no relationship of tumor incidence to tacrolimus dosage was found. The highest doses used in the mouse and rat studies were 0.8 – 2.5 times [mice] and 3.5 – 7.1 times [rats] the recommended clinical dose range of 0.1 – 0.2 mg/kg/day when corrected for body surface area.)
Reproductive Toxicity: Suspected of damaging the unborn child. (No impairment of fertility was demonstrated in studies of male and female rats. Tacrolimus, given orally at 1.0 mg/kg (0.7 – 1.4X the recommended clinical dose range of 0.1 – 0.2 mg/kg/day based on body surface area corrections) to male and female rats, prior to and during mating, as well as to dams during gestation and lactation, was associated with embryolethality and with adverse effects on female reproduction. Effects on female reproductive function [parturition] and embryolethal effects were indicated by a higher rate of preimplantation loss and increased numbers of undelivered and nonviable pups. When given at 3.2 mg/kg [2.3 – 4.6X the recommended clinical dose range based on body surface area correction], tacrolimus was associated with maternal and paternal toxicity as well as reproductive toxicity including marked adverse effects on estrus cycles, parturition, pup viability, and pup malformations.)
Specific Target Organ Toxicity (Single Exposure): Not classified
Specific Target Organ Toxicity (Repeated Exposure): Not classified
Aspiration Hazard: Not classified

Symptoms/Injuries After Eye Contact: Stinging, tearing, redness, and swelling of eyes.
Symptoms/Injuries After Ingestion: Ingestion is likely to be harmful or have adverse effects.
Chronic Symptoms: May damage the unborn child.
